

Relationship Status

The **Relationship Status** mapping allows you to change the way your institution's relationship statuses are categorized for reporting purposes in the Platform. You can map each relationship status to one of the following options:

- Show in Targeter (entities with these status *will* be shown in Targeter results)
- Hide in Targeter (entities with these statuses *will not* be shown in Targeter results)

Changes made to the relationship status mapping may not reflect in the platform until the next time you nightly feed is processed.

The Edit Relationship Status Mapping table shows all of the codes you have defined, even if the codes are not in use (these will have 0 records). The table also shows all codes that are in use, even if a code definition was not found (Your Description will show "No Description Found").

Please note we may have built custom logic around your data if this was requested or necessary for implementing your data feed. If so, the codes and descriptions shown here may not match exactly what is in your system. Please contact [Support](#) with any questions about the information presented here.

Click on the thumbnail below for a closer look!

Edit Relationship Status Mapping

*Note: Only constituents with a relationship status that is mapped to Active will be included in your participation Mapping Missing on **0 of 4** rate metrics.

Your Code	Your Description	Reeher Mapping	Targeter Display	# Relationship Status
A	Active	Active	Show in Targeter	357,856
D	DECEASED	Deceased	Hide in Targeter	0
L	LOST	Lost	Show in Targeter	0
X	Purgable	Inactive	Hide in Targeter	0
