

# Proposal Status

The **Proposal Status** mapping allows you to change the way your institution's proposal statuses are categorized for reporting purposes in the Platform. You can map each proposal status to one of the following options:

- In Development
- Approved
- Declined
- Submitted / Pending

Any changes you make to the proposal status mapping will be reflected immediately in the Platform.

The Edit Proposal Status Mapping table shows all of the codes you have defined, even if the codes are not in use (these will have 0 records). The table also shows all codes that are in use, even if a code definition was not found (Your Description will show "No Description Found").

Please note we may have built custom logic around your data if this was requested or necessary for implementing your data feed. If so, the codes and descriptions shown here may not match exactly what is in your system. Please contact Support at [reehersupport@blackbaud.com](mailto:reehersupport@blackbaud.com) with any questions about the information presented here.
