Version 4.5.4 - January 25, 2018

This list consists of key new features, as well as issues reported by or of interest to customers. It is not an exhaustive list of updates.

New Features and Improvements

1. The Assigned Prospect Giving notification now uses the processed date (if provided) on gifts to determine when notifications are sent. This will prevent gifts that are entered with a transaction date in the past from potentially not being included in notifications.

Bug Fixes

1. Some viewports in the Annual Fund and Advancement layers were adjusted to show FYTD and CYTD data more accurately.
2. Hovering over the names of options in the School/Unit field will show the full name, if that value is truncated.
