

Version 4.7.0 - September 7, 2018

This list consists of key new features, as well as issues reported by or of interest to customers. It is not an exhaustive list of updates.

New Features/Improvements

1. Class Agent now supports Giving + Event campaigns. Campaigns of that type allow agents to collect information on both giving and event attendance from constituents.
2. A new Reeher Template has been added to Targeter called "Emerging Prospects". That template is designed to find constituents who have potential to be your future major giving prospects.
3. In Officer Benchmarks, the display of the Average Portfolio Size column has been improved, so smaller portfolios receive a better letter grade.

Bug Fixes/Maintenance

1. An issue that was preventing touch ID/pin login in Reeher mobile has been resolved. You may need to set up your touch ID/pin again in the app if you previously received an error.
2. Users with access to both Class Agent and OneAppeal are again able to see tabs for each in the navigation at the top of the platform.
3. Proposals have been updated to function better in situations where an officer does not have a first or last name.
4. The display/function of the platform in Internet Explorer 11 has been improved in several places.
