

Version 4.7.2 - October 5, 2018

This list consists of key new features, as well as issues reported by or of interest to customers. It is not an exhaustive list of updates.

New Features/Improvements

1. Class Agent managers and volunteers will notice a name change from Class Agent to Blackbaud Volunteer Network Fundraising. All functionality remains consistent, and we will continue to support and develop this product. Additionally, volunteers will continue to login at classagent.com/volunteer until further notice.
2. The Attachments page in Control Panel > Manage Platform has been improved for customers who have a large number of attachments.

Bug Fixes/Maintenance

1. The Goals by Officer viewport in Console is now showing more accurate goal values when an officer has more than one goal of the same type. This also will resolve a similar issue in the monthly notification officers receive about their goals.
2. The Report Library page in Advancement is no longer showing three copies of each report (one is probably plenty).
3. When a saved Targeter query is deleted, users with a subscription to that query will no longer continue to receive notifications for it.
