

Version 4.8.7 - May 17, 2019

This list consists of key new features, as well as issues reported by or of interest to customers. It is not an exhaustive list of updates.

Improvements

1. On the Relationship Profile, a table has been added that displays all relevant prospect data (such as stage, rating, and assigned officers) for the constituent.
2. Contact Reports can now be categorized as "social media" or "text message" type, and appeals can be categorized as "text message" type, in the code mapping menu in Control Panel. Viewports that display types also display those new options.

Bug Fixes/Maintenance

1. When viewing the drilldown of a proposal-based viewport, the Prospect Rating column can once again be added without error.
