

Week of August 19 - August 23, 2019

This list consists of key new features, as well as issues reported by or of interest to customers. It is not an exhaustive list of updates.

Improvements

1. On Console, the Tasks viewport now allows users to decide whether they want to see tasks created by/assigned to them, or if they want to see tasks associated with the currently selected gift officers.
2. A Project of Interest column has been added to proposal drilldowns.
3. For Activity Center customers that use grouped proposals, the name of the proposal group will now display alongside the sub-proposals name in proposal drilldowns.

Bug Fixes/Maintenance

1. Users accessing FPM via Firefox should see improved loading times while in the Major Giving layer.
2. An issue preventing the Birthday filter in Targeter from showing correct results has been resolved.
3. Some clients were unable to add Prospect Rating, Prospect Stage, and Prospect Classification to results in Targeter. Those columns are now available again.
4. For Volunteer Network Fundraising clients with volunteers in multiple segments, we've improved the logic around what scripts they are shown.
