

Sky UX Migration

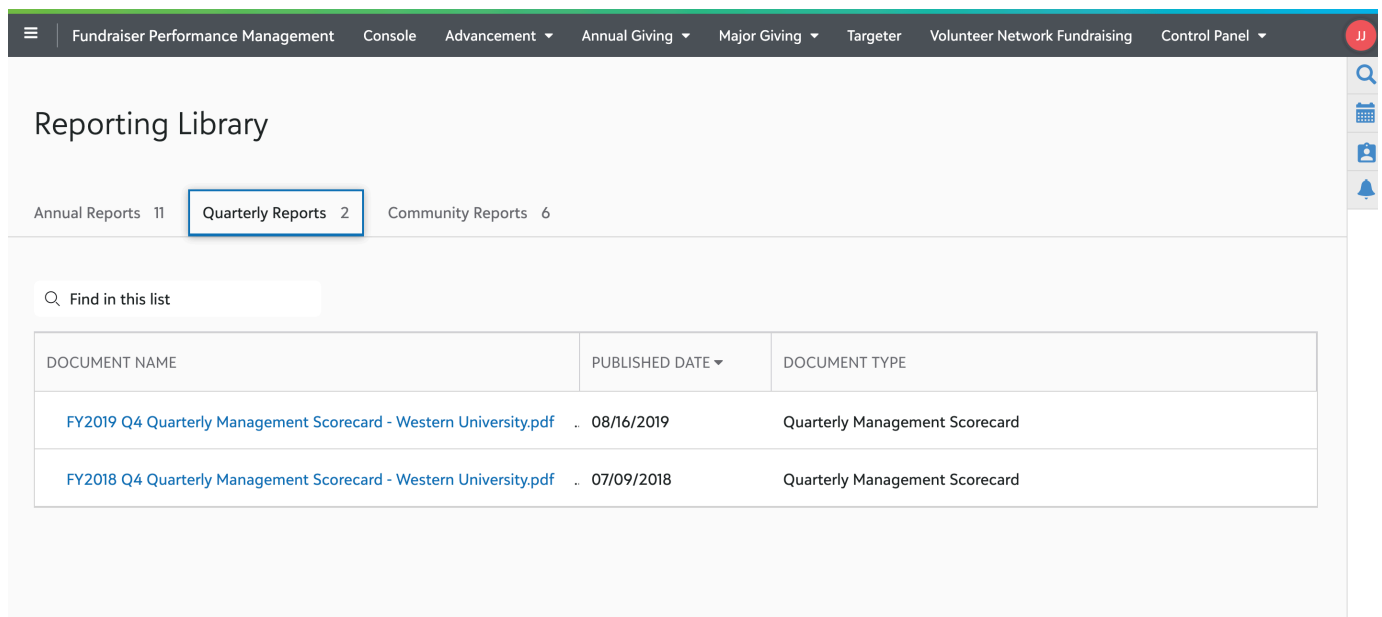

We are pleased to announce that FPM has begun the process of upgrading to the SKY UX user interface. We will share more updates as they become available.

What is it and how does it benefit you?

SKY UX is Blackbaud's user experience framework, delivering a cohesive, modern experience across Blackbaud cloud solutions. This makes working across products easier, so your team can be more productive in less time. It also allows for more productive workflows and room for additional FPM upgrades in the future.

When will you see it in FPM?

The move to SKY UX has begun, and work will continue through 2023. Report Library, in the Advancement layer, will migrate first and will be live August 23rd. You can also check out the screenshot below.

The screenshot shows the 'Reporting Library' section of the Fundraiser Performance Management (FPM) interface. The top navigation bar includes links for Fundraiser Performance Management, Console, Advancement, Annual Giving, Major Giving, Targeter, Volunteer Network Fundraising, and Control Panel. The 'Reporting Library' title is prominently displayed. Below the title, there are tabs for 'Annual Reports' (11), 'Quarterly Reports' (2), and 'Community Reports' (6). The 'Quarterly Reports' tab is selected and highlighted with a blue border. A search bar labeled 'Find in this list' is positioned above a table. The table has three columns: 'DOCUMENT NAME', 'PUBLISHED DATE', and 'DOCUMENT TYPE'. It contains two rows of data, both for 'Quarterly Management Scorecard' documents from Western University.

DOCUMENT NAME	PUBLISHED DATE	DOCUMENT TYPE
FY2019 Q4 Quarterly Management Scorecard - Western University.pdf	08/16/2019	Quarterly Management Scorecard
FY2018 Q4 Quarterly Management Scorecard - Western University.pdf	07/09/2018	Quarterly Management Scorecard

Will there be any downtime or outages

We do not anticipate any downtime or outages for clients. If that changes we will notify all clients ahead of the outage.

Will there be changes to the SFTP or the process for sending nightly files to FPM?

No. There will be no changes to the SFTP or the nightly files. This is a UX (User Experience) change only and the files populating data, as well as the display of data in FPM will not be impacted.

Will there be a need to unblock any new firewalls?

No, we do not anticipate any firewall changes.

Where can I learn more about Blackbaud's SkyUX?

If you are interested in learning more about Blackbaud's Sky UX, you can find documentation [here](#).
